(a) Reliable heredity amplifies inherited causal organization

(b) Scalar environmental distance fails prospectively

(c) Directional response replaces a distance-only law

$\mathcal{R} = f(\|\delta\|)$

$\mathcal{R}(B_H + \delta) \approx R_0 + g_T^T\delta + \frac{1}{2}\delta^T H_T \delta$

Prospective failure of the scalar-distance law motivated the revised local geometry, which permits anisotropic response.

(d) Equal-distance directional profile is predicted
