
(a)
Stronger scaffold lowers ancestral performance
ancestral reproductive score (generation 0)
physical scaffold strength β/Θ

(b)
Selection drives compensatory recovery
selected - ancestor
neutral - ancestor
change from ancestral reproductive score
physical scaffold strength β/Θ

(c)
Relation erasure changes lower-level chemistry
selected-specific ΔC_down (bits)
primary erasure
exact-margin erasure

(d)
Common-probe responses retain evolutionary history
evolutionary scaffold
current probe scaffold
