
(a)
Training history predicts maximal expression
prespecified prediction
one grid interval
observed peak
probe strength at maximal expression
training scaffold strength β/Θ
5/5 peaks within one grid step
no-refit surface R² = 0.966

(b)
Prespecified directional contrast succeeds
292.5° response (predicted strong direction)
202.5° response (predicted weak direction)
292.5° > 202.5°: 30/30 blocks
sign p = 9.31e-10
anisotropy p = 2.00e-05
