
(a)
Post-confirmatory acquisition-expression across probe strengths
Training strength
Mean ± 1 SEM
p = 0.95; generation 50
relational causal value
ΔV_rel (fitness units)
probe strength α (B_P = αB_H)
(b)
Original prospective confirmation
Separate tests; separate horizontal scales
200 generations; 99% bootstrap confidence intervals
History specificity
30/30 positive
matching-history fitness advantage
Acquisition-expression
30/30 positive
ΔV_rel(0.4B_H) − ΔV_rel(B_H)
Equal-distance anisotropy
30/30 positive
ΔV_rel(χ = π) − ΔV_rel(χ = 0)
(c)
Post-confirmatory acquisition-expression development
acquisition-expression contrast
generation
(d)
Post-confirmatory equal-distance anisotropy development
anisotropy contrast
generation
